Abstract of corresponding document: **WO02063263**

The invention relates to a pressure gauge (10), in which the pressure of a process medium is measured using a ceramic sensor element (12). A seal that seals the process medium is achieved by means of a sealing device (15), said device comprising an elastic support element (151) and a flat sealing overlay (153) located thereon, consisting of a cold-extruded material.
